

Cloudia.Pro

Multi-vendor cloud services

Platform

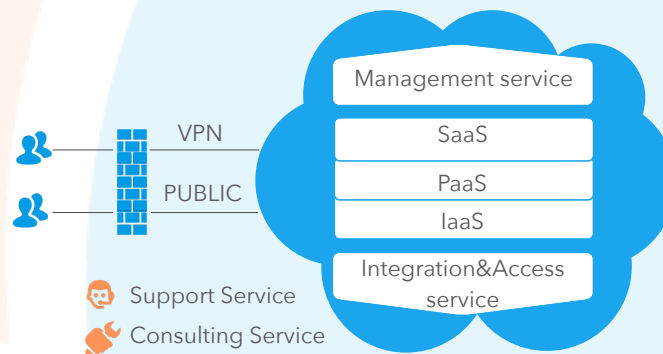

Cloudia Management Platform is a modern platform for managing hardware and software resources and that provides virtualized services in the public, private or hybrid cloud. Cloudia.PRO solution gives an opportunity promptly to order:

- Pool resources (CPU, RAM, HDD)
- Virtual Machine with predefined operational systems
- Set of predefined and preinstalled applications and services

Common WEB-interface of Cloudia.PRO allows customers quickly get an access to the cloud infrastructure and manage the system in complex. Current solution is based on open source and non-open source technologies such as Oracle, OpenVPN, FreeNAS, Apache, PostgreSQL, Docker, etc. This approach consolidates in itself all best practices in IT and offers customers the best of breed solution.

Service model

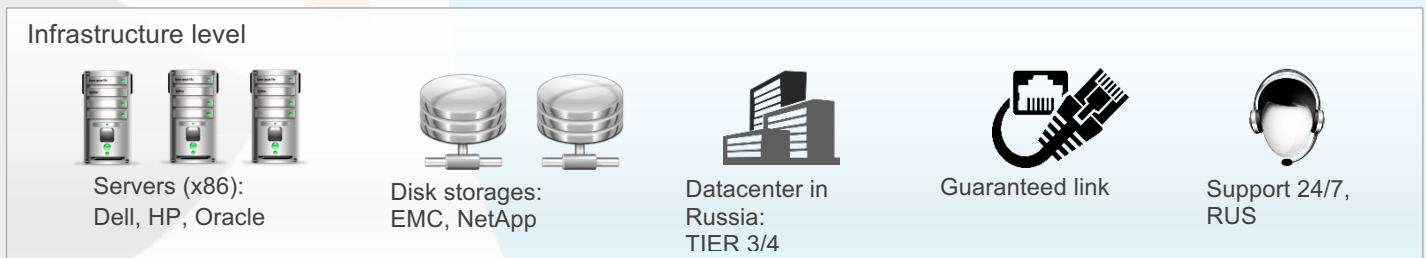

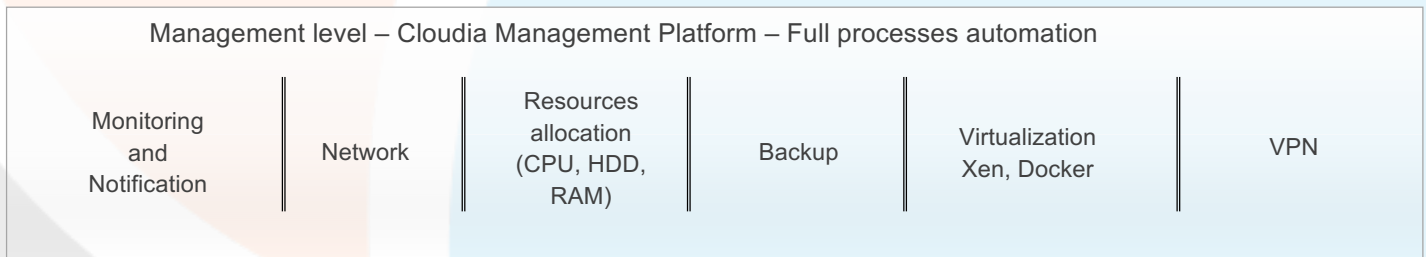

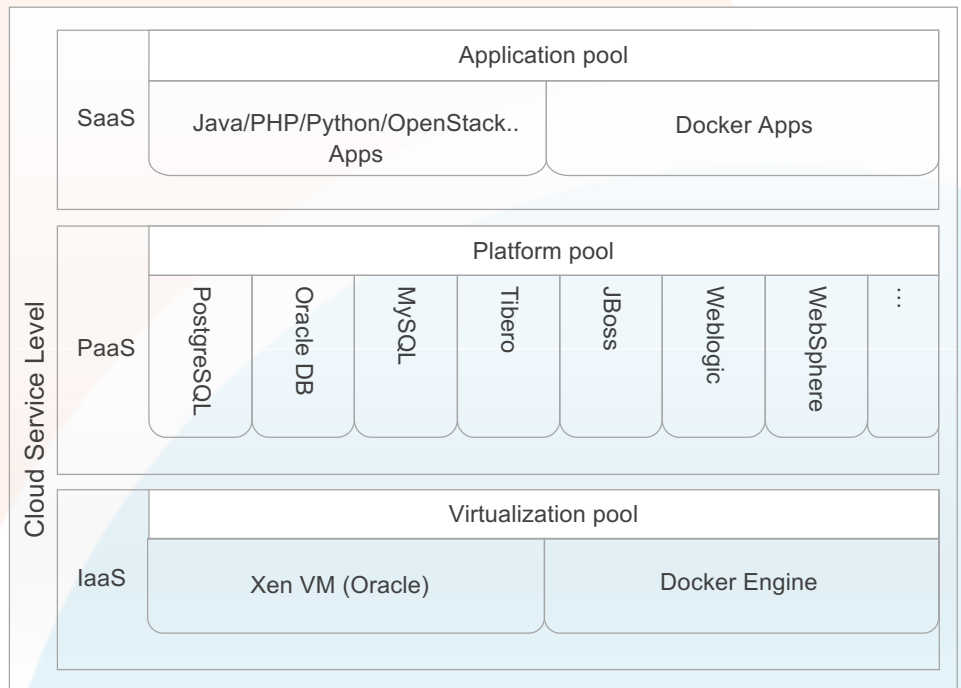

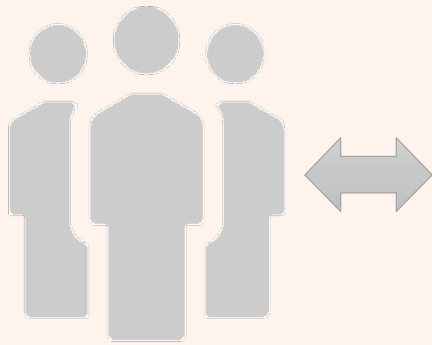

Company aims to offer to our clients the most convenient way of using cloud services. Our highly proficient team provides reliable infrastructure where the customer can order and control functioning of any services from disk drivers to applications. Management tools give an opportunity to extend or reduce volume of services immediately. Support team works 24x7. Consulting team experts have a big experience in data integration and migration of projects between on-premises and cloud solutions.

Management Service	Management Service provides a self-service portal for business users where everyone can accept or refuse from necessary volume of resources in a couple of clicks. At a technical layer resource, management process is quite complicated and automatically differentiates user access and procure load balancing.
SaaS	SaaS offers an opportunity to get an access to predefined application and start working as soon as possible. Portfolios of available applications are expanded regularly.
PaaS	PaaS offers an opportunity to automate development platforms and databases deployment. Our services are based on solutions of worldwide companies such like Oracle, Postgres, Tiberio, etc.
IaaS	IaaS offers an opportunity to order a virtual machine with flexible resource management tools. Virtualization is based on Oracle and Dockers technologies.
Integration and Access Service	Integration and Access Service offers additional types of services like Virtual Private Network, public IP, access to fileserver, integration tools, backup/restore tools, etc.

Platform logical architecture

Platform logical architecture demonstrates system approach in stable, convenient and functional software solution implementation. Each subsystem in Cloudia.PRO platform is designed both on physical and logical layers which ensures popularity of the services on the market.

Platform features

Cloudia.Pro platform offers the customer a flexible resources management tool that helps in specific and important tasks resolution:

Resources	Operation systems	Platforms and databases	Applications
<ul style="list-style-type: none">• CPU• RAM• Disk• IP• VPN• VLAN• etc.	<ul style="list-style-type: none">• Red Hat Linux• Oracle Linux• Windows• CentOS• HP-UX• AIX• SUSE• Oracle Solaris• Ubuntu• etc.	<ul style="list-style-type: none">• PostgreSQL• Oracle DB• MySQL• Tibero• SQL Server• .Net• Weblogic• WebSphere• JRE• JBoss• etc.	<ul style="list-style-type: none">• Our partner's applications• Lots of applications available from Docker containers

Our specialization

Cloud solutions

- Configuration of private and hybrid cloud platform onsite
- Provide an access to own public cloud service based on Cloudia.PRO platform

Consulting

- Integration with heterogeneous sources
- Migration from on-premise to the cloud platform
- Platform customization for users

Import substitution

- Integration with open source solutions
- The platform development is carried out in Russia
- Support team is in Russia
- Focus on Russian and European markets

In contrast to our competitors Cloudia.PRO provides highly available services. A deep and detailed understanding of the problems of our customers gives an ability to provide full cycle of cloud services from technologies to the choice of a data center. Our company also ensures guaranteed link, helps in integration processes and provides support both in Russian and English languages.
